EXPERIENCE

Crystaltech Services Pvt. Ltd.

May 2025 : July 2025

Web Developer Intern

- Shipped backend and frontend across **3 client projects** (Node.js, Express.js, React) from spec to staging; owned API contract design for 2 modules including request schemas, validation rules, and typed error codes.
- **Cut query latency** on a high-traffic PostgreSQL table by rewriting unindexed joins and adding composite indexes, verified under load testing.
- Completed 3 Agile sprint cycles: daily standups, peer code reviews, and production bug triage.

PROJECTS

CodeGecko : AI Code Review Platform

Next.js, TypeScript, Prisma, PostgreSQL — [GitHub](#) · [Live](#)

- Built a **GitHub OAuth + webhook pipeline** that authenticates via OAuth, receives PR events asynchronously, and triggers AI analysis with zero polling; structured feedback delivered without manual reviewer intervention.
- Normalised PostgreSQL schema (repos, PRs, comments, users) with Prisma migrations; responses validated with Zod, wrapped in typed error envelopes, with retry logic for rate-limit handling.

GemCLI : AI CLI Assistant

Node.js, TypeScript — [GitHub](#)

- Designed a **class-based OOP architecture** (command registry, session state, I/O handler as isolated classes): each module under 150 lines, independently testable, extensible without touching core dispatch logic.
- Command parser handles flag validation, unknown-input fallback, and structured error messages without crashing on malformed input.

Chatify : Real-Time Messaging App

Node.js, Socket.IO, MongoDB — [GitHub](#) · [Live](#)

- Implemented **bidirectional real-time messaging** via Socket.IO named event contracts: message delivery, typing indicators, and read receipts all event-driven with no polling.
- Connection lifecycle tracks active socket IDs per room; handles reconnect without duplicate event registration or state leaks; messages persisted to MongoDB indexed by room + timestamp.

Mercato : Creator Marketplace

React, Express.js, PostgreSQL, Clerk — [GitHub](#) · [Live](#)

- Implemented **role-based access control** (creator vs buyer): separate routes, UI surfaces, and data permissions per role; all API routes secured via Clerk JWT middleware with protected frontend redirects.
- Relational schema with FK constraints and transaction blocks for order creation: prevents partial writes and orphaned records under concurrent requests.

EDUCATION

Madhav Institute of Technology and Science, Gwalior

Expected July 2026

Bachelor of Technology in Internet of Things

CPI: 7.4

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, SQL

Backend: Node.js, Express.js, Prisma ORM, Socket.IO, REST APIs

Frontend: React.js, Next.js, TailwindCSS

Databases: PostgreSQL, MongoDB, MySQL

Tools: Git, Linux, Postman, Agile

ACHIEVEMENTS

- Solved **400+ DSA problems**: consistent focus on graph traversal, DP, and sliding-window patterns.
- **20+ public GitHub repositories** with documented READMEs and live deployments across all major projects.

CERTIFICATIONS

- AWS Cloud Practitioner Essentials (2024)
